Four Paradigms of NLP Technical Development

- Feature Engineering
- Architecture Engineering
- Objective Engineering
- Prompt Engineering

Feature Engineering

- **Paradigm:** Fully Supervised Learning (Non-neural Network)
- **Time Period:** Most popular through 2015
- **Characteristics:**
 - Non-neural machine learning models mainly used
 - Require manually defined feature extraction
- **Representative Work:**
 - Manual features -> linear or kernelized support vector machine (SVM)
 - Manual features -> conditional random fields (CRF)

Architecture Engineering

- **Paradigm:** Fully Supervised Learning (Neural Networks)
- **Time Period:** About 2013-2018
- **Characteristics:**
 - Rely on neural networks
 - Do not need to manually define features, but should modify the network structure (e.g.: LSTM v.s CNN)
 - Sometimes used pre-training of LMs, but often only for shallow features such as embeddings
- **Representative Work:**
 - CNN for Text Classification

Objective Engineering

- **Paradigm:** Pre-train, Fine-tune
- **Time Period:** 2017-Now
- **Characteristics:**
 - Pre-trained LMs (PLMs) used as initialization of full model - both shallow and deep features
 - Less work on architecture design, but engineer objective functions
- **Typical Work:**
 - BERT → Fine Tuning

Prompt Engineering

- **Paradigm:** Pre-train, Prompt, Predict
- **Date:** 2019-Now
- **Characteristic:**
 - NLP tasks are modeled entirely by relying on LMs
 - The tasks of shallow and deep feature extraction, and prediction of the data are all given to the LM
 - Engineering of prompts is required
- **Representative Work:**
 - GPT3

What is Prompting?

- Encouraging a pre-trained model to make particular predictions by providing a "prompt" specifying the task to be done.

What is the general workflow of Prompting?

- Prompt Addition
- Answer Prediction
- Answer-Label Mapping

Prompt Addition

- **Prompt Addition:** Given input x , we transform it into prompt x' through two steps:
 - Define a template with two slots, one for input $[x]$, and one for the answer $[z]$
 - Fill in the input slot $[x]$

Example: Sentiment Classification

Input: $x = \text{"I love this movie"}$

Template: $[x]$ Overall, it was a $[z]$ movie

Prompting: $x' = \text{"I love this movie. Overall it was a } [z] \text{ movie."}$

Answer Prediction

- Answer Prediction: Given a prompt, predict the answer [z]
 - Fill in [z]

Example

Input: $x = \text{"I love this movie"}$

Template: $[x]$ Overall, it was a $[z]$ movie

Prompting: $x' = \text{"I love this movie. Overall it was a } [z] \text{ movie."}$

Predicting: $x' = \text{"I love this movie. Overall it was a } \text{fantastic} \text{ movie."}$

Mapping

- Mapping: Given an answer, map it into a class label

Example

Input: $x = \text{"I love this movie"}$

Template: $[x]$ Overall, it was a $[z]$ movie

Prompting: $x' = \text{"I love this movie. Overall it was a } [z] \text{ movie."}$

Predicting: $x' = \text{"I love this movie. Overall it was a } \text{fantastic} \text{ movie."}$

Mapping: $\text{fantastic} \Rightarrow \text{Positive}$

Types of Prompts

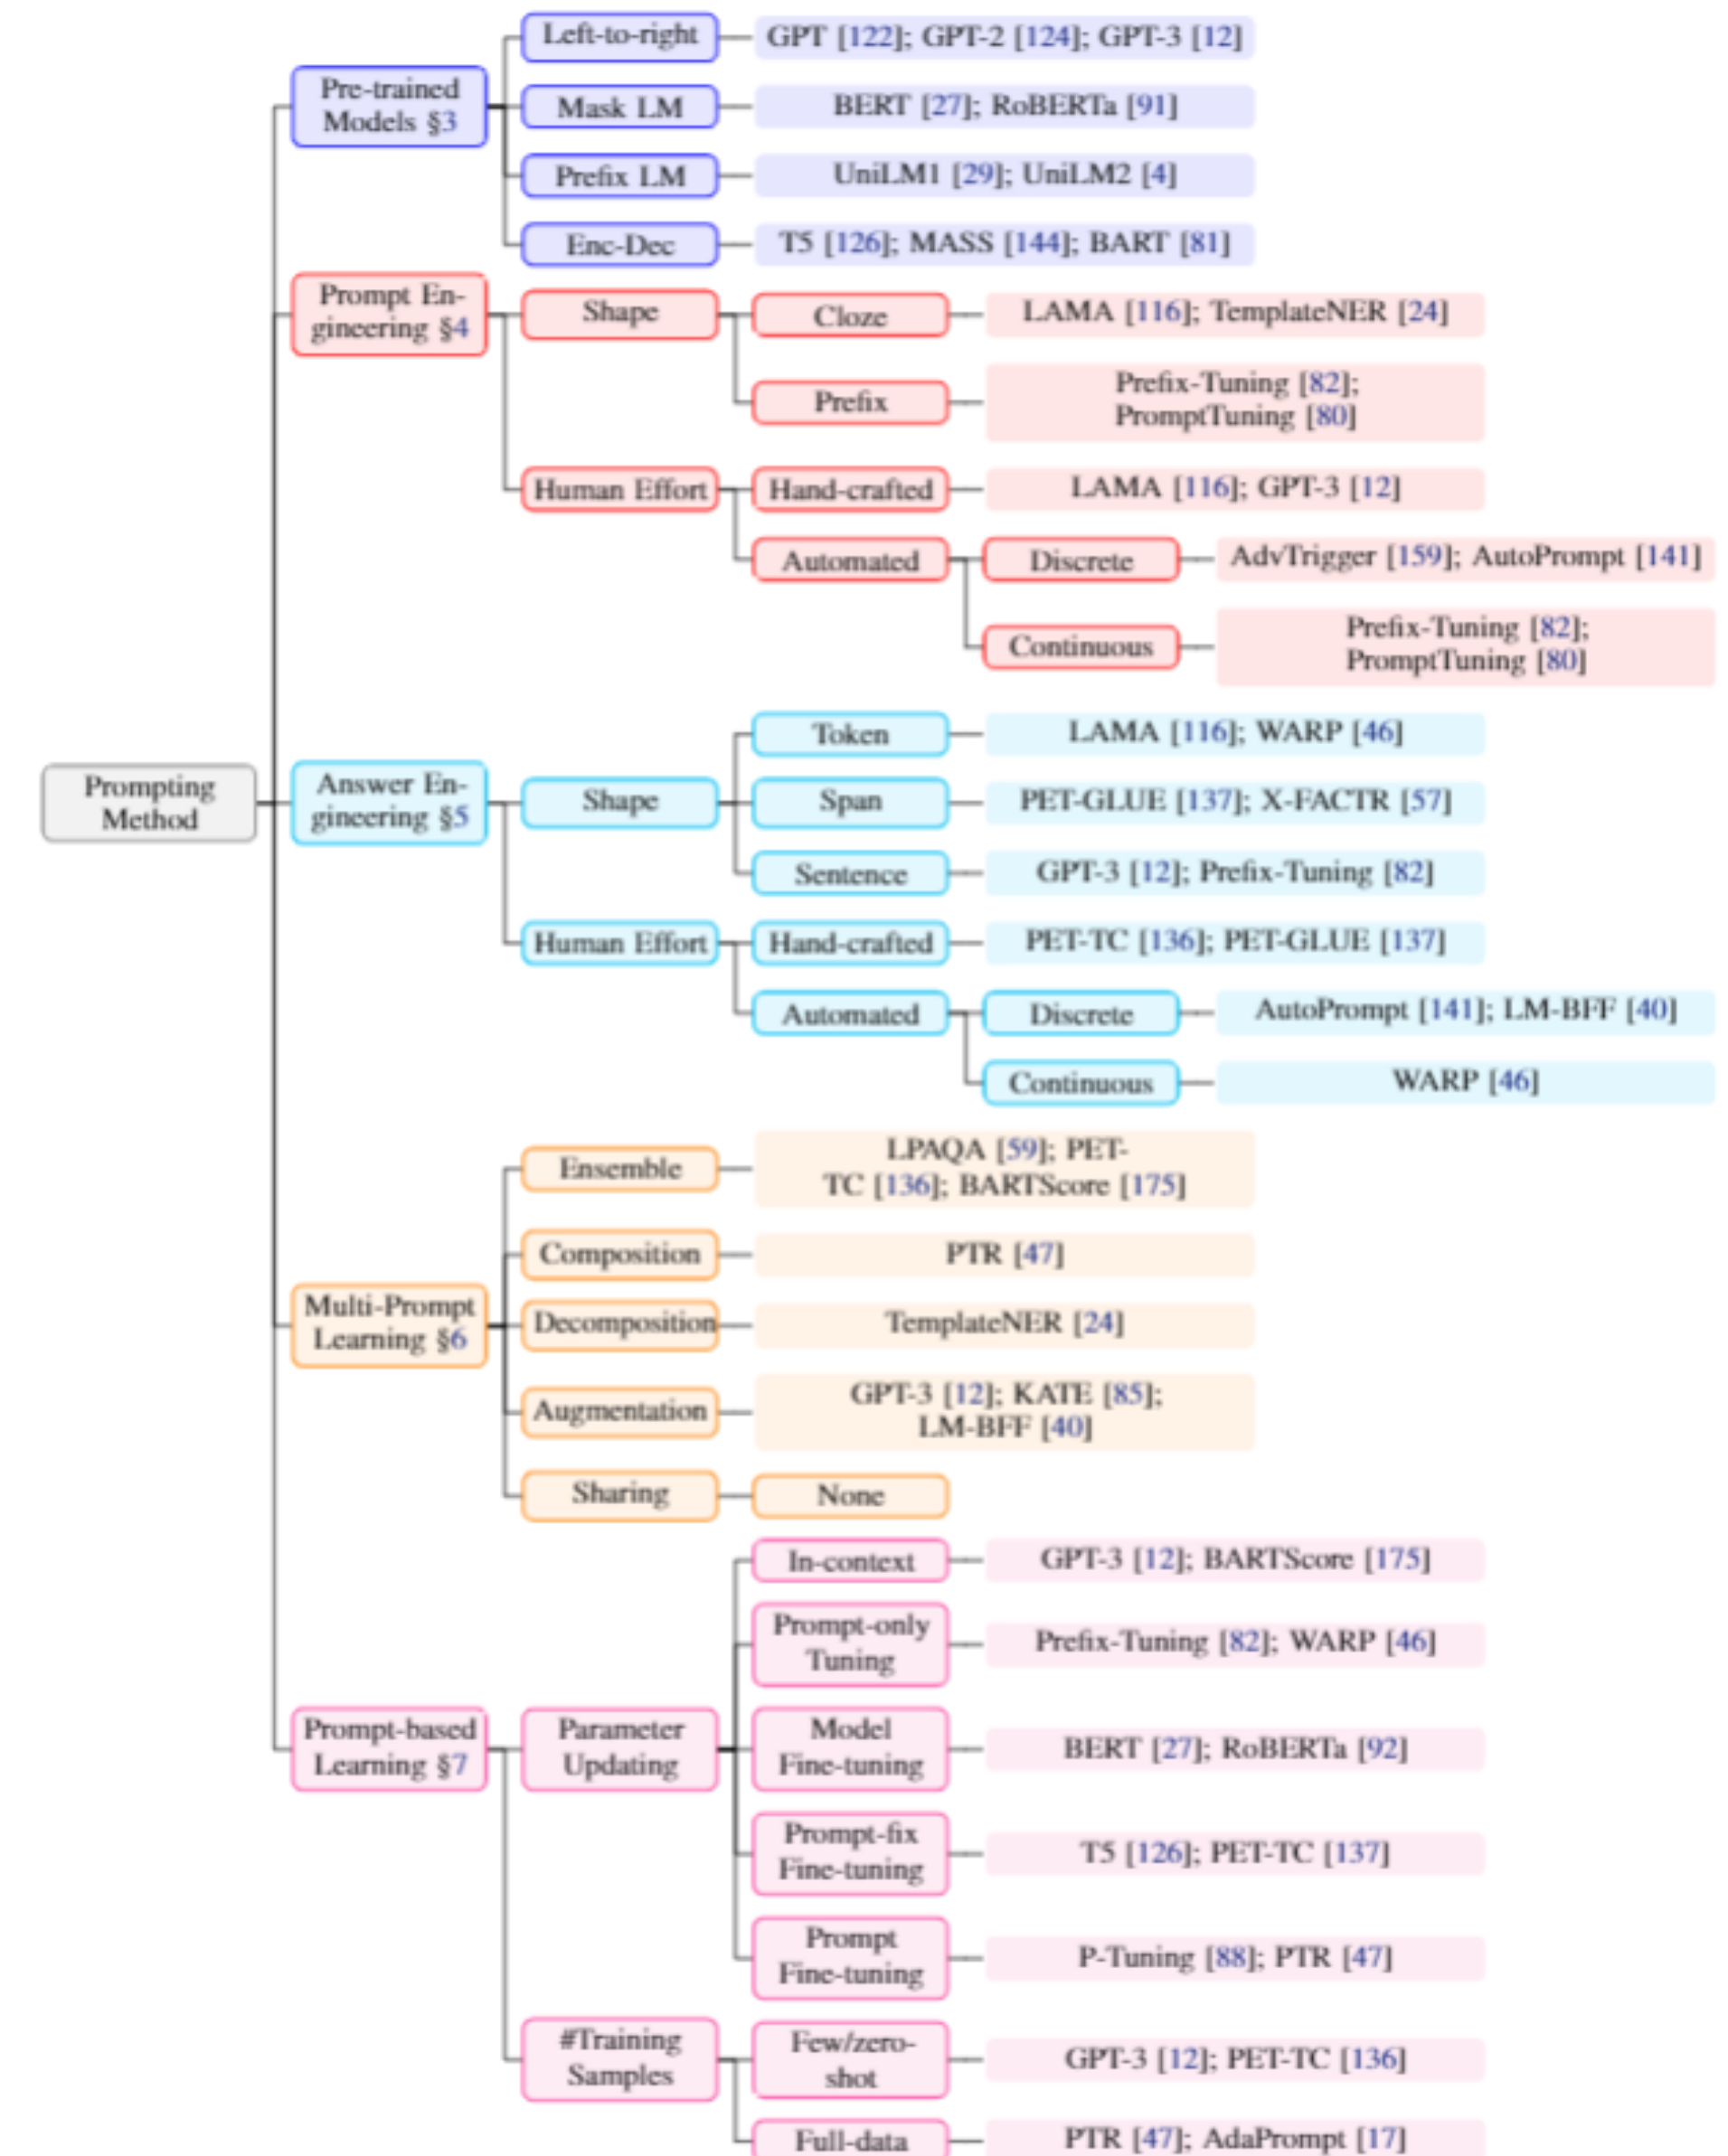

- Prompt: I love this movie. Overall it was a [z] movie
- Filled Prompt: I love this movie. Overall it was a boring movie
- Answered Prompt: I love this movie. Overall it was a fantastic movie
- Prefix Prompt: I love this movie. Overall this movie is [z]
- Cloze Prompt: I love this movie. Overall it was a [z] movie

Pre-trained Language Models

Popular Frameworks

- Left-to-Right LM
- Masked LM
- Prefix LM
- Encoder-decoder

Left-to-right Language Model

- **Characteristics:**

- First proposed by Markov (1913)
- Count-based-> Neural network-based
- Specifically suitable to highly larger-scale LMs

- **Example:** GPT-1, GPT-2, GPT-3

- **Roles in Prompting Methods**

- The earliest architecture chosen for prompting
- Usually equipped with prefix prompt and the parameters of PLMs are fixed

Masked Language Model

- **Characteristics:**

- Unidirectional -> bidirectional prediction
- Suitable for NLU tasks

- **Example:**

- BERT, ERNIE

- **Roles in Prompting Methods**

- Usually combined with cloze prompt
- Suitable for NLU tasks, which should be reformulated into a cloze task

Prefix Language Model

- **Characteristics:**

- A combination of Masked & Left-to-right
- Use a Transformer but two different mask mechanisms to handle text X and y separately
- Corruption operations can be introduced when encoding X

- **Examples:**

- UniLM 1,2, ERNIE-M

Encoder-Decoder

- **Characteristics:**

- A denoised auto-encoder
- Use two Transformers and two different mask mechanisms to handle text X and y separately
- Corruption operations can be introduced when encoding X

- **Examples:**

- BART, T5

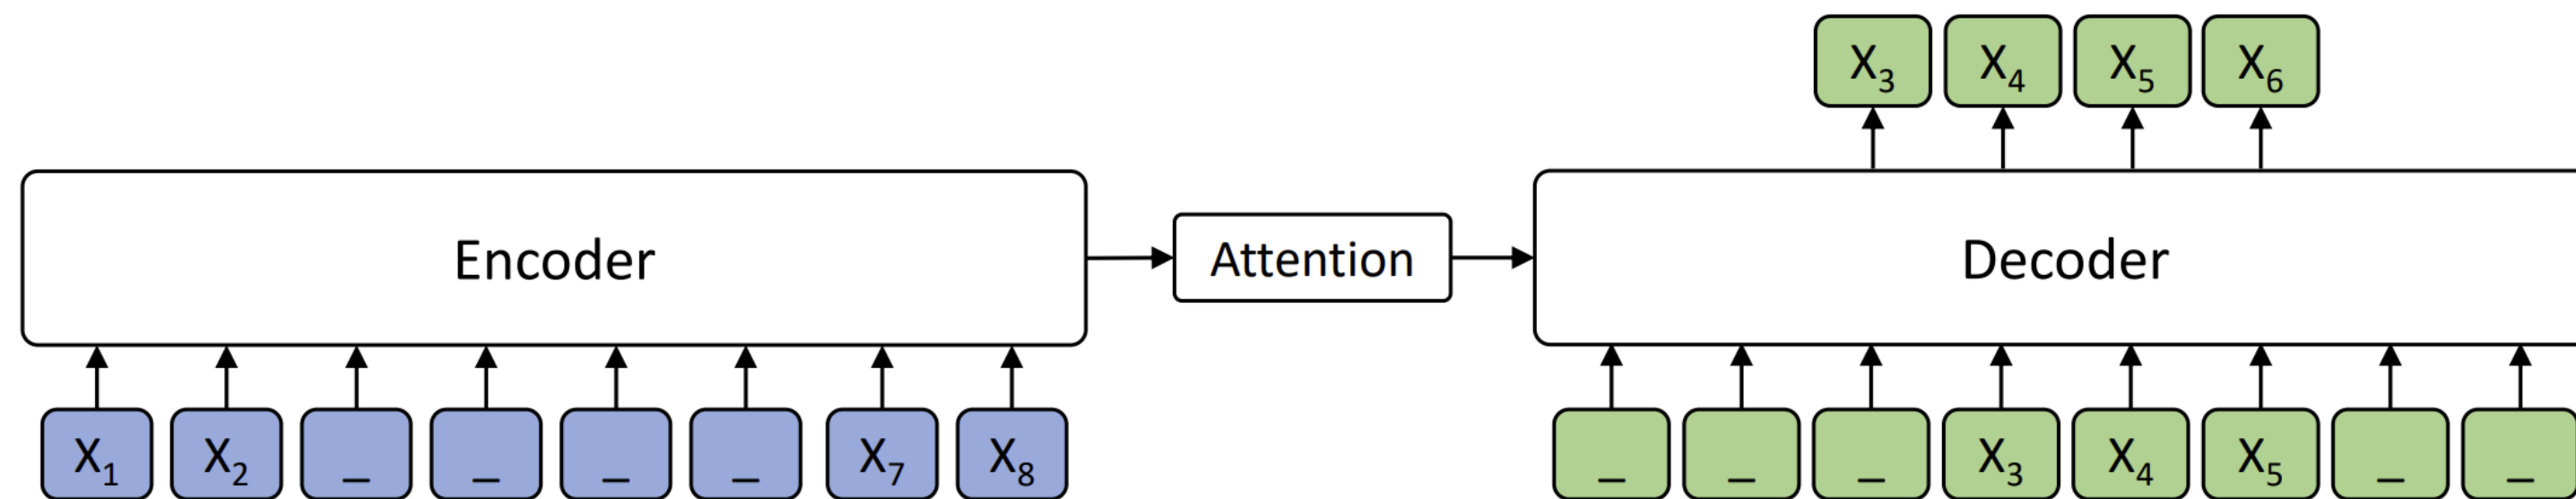

Encoder-decoder Pre-training Methods

Representative Methods

- MASS
- BART (mBART)
- UniLM
- T5

MASS

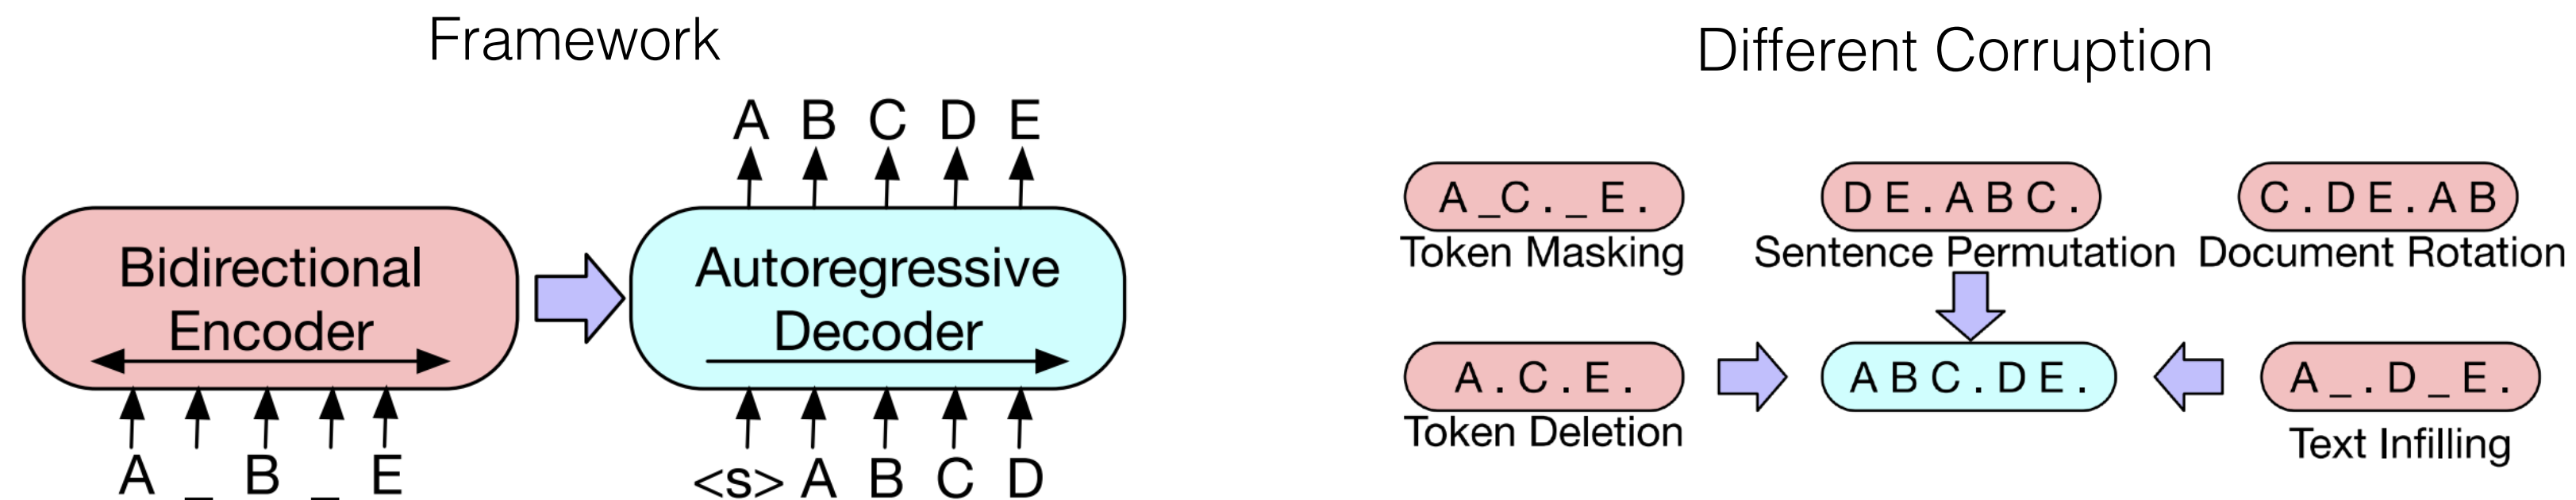

(Song et al.)

- Model: Transformer-based Encoder-decoder
- Objective: *only* predict masked spans
- Data: WebText

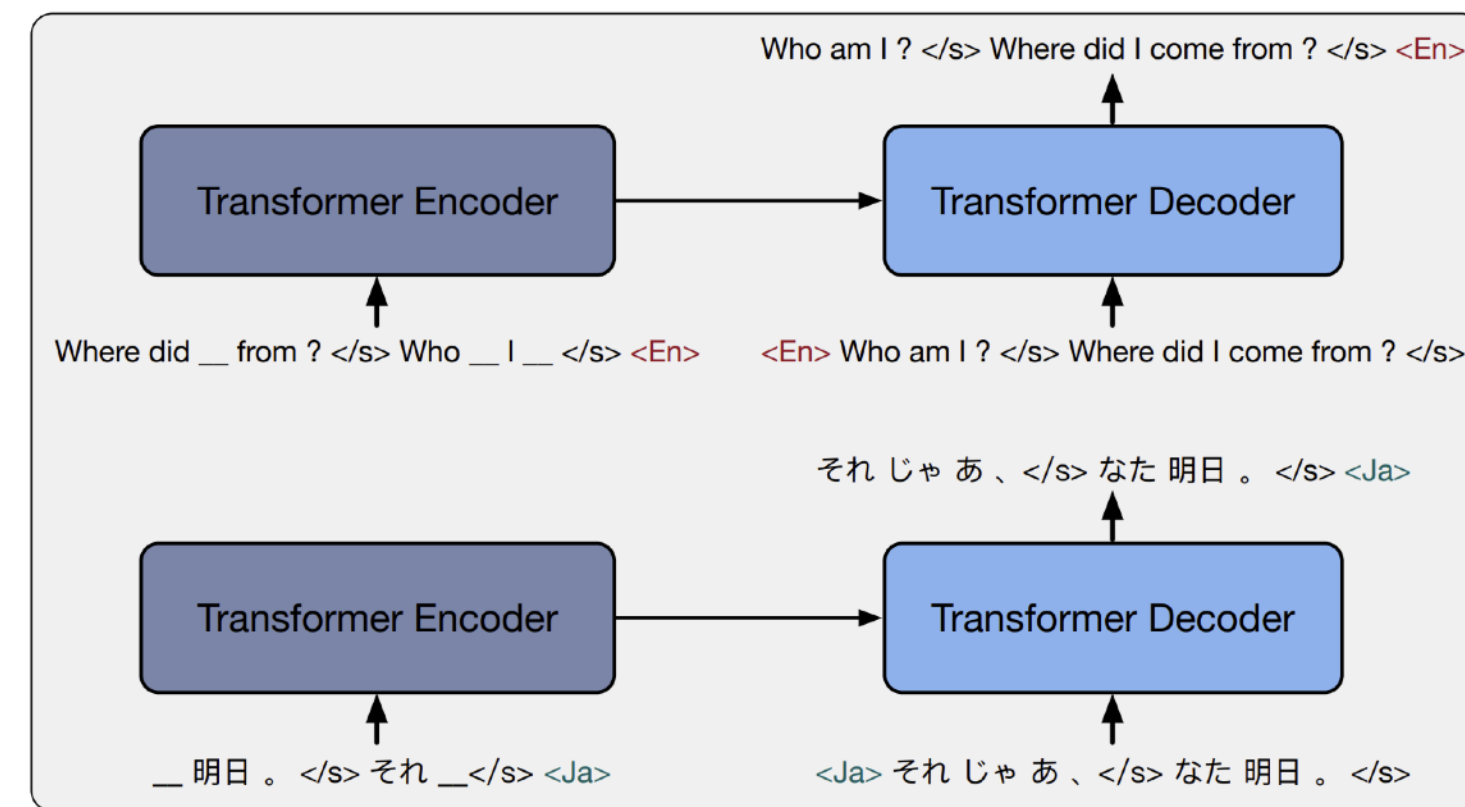

BART

(Lewis et al.)

- Model: Transformer-based encoder-decoder model
- Objective: Re-construct (corrupted) *original sentences*
- Data: similar to RoBERTa (160GB): BookCorpus, CC-NEWS, WebText, Stories

mBART (Liu et al.)

- Model: Transformer-based *Multi-lingual Denoising* auto-encoder
- Objective: Re-construct (corrupted) *original sentences*
- Data: CC25 Corpus (25 languages)

UNiLM

(Dong et al.)

- Model: prefixed-LM, left-to-right LM, Masked LM
- Objective: three types of LMs, *shared* parameters
- Data: English Wikipedia and BookCorpus

T5

(Raffel et al.)

- Model: left-to-right LM, Prefixed LM, encoder-decoder
- Objective: explore different objectives respectively
- Data: C4 (750G) + Wikipedia + RealNews + WebText

T5

(Raffel et al.)

Objective	Inputs	Targets
Prefix language modeling	Thank you for inviting	me to your party last week .
BERT-style Devlin et al. (2018)	Thank you <M> <M> me to your party apple week .	<i>(original text)</i>
Deshuffling	party me for your to . last fun you inviting week Thank	<i>(original text)</i>
MASS-style Song et al. (2019)	Thank you <M> <M> me to your party <M> week .	<i>(original text)</i>
I.i.d. noise, replace spans	Thank you <X> me to your party <Y> week .	<X> for inviting <Y> last <Z>
I.i.d. noise, drop tokens	Thank you me to your party week .	for inviting last
Random spans	Thank you <X> to <Y> week .	<X> for inviting me <Y> your party last <Z>

- Model: left-to-right LM, Prefix LM, encode-decoder
- Objective: explore different objectives respectively
- Data: C4 (750G) + Wikipedia + RealNews + WebText

Application of Prefix LM/Encoder-Decoders in Prompting

- **Conditional Text Generation**

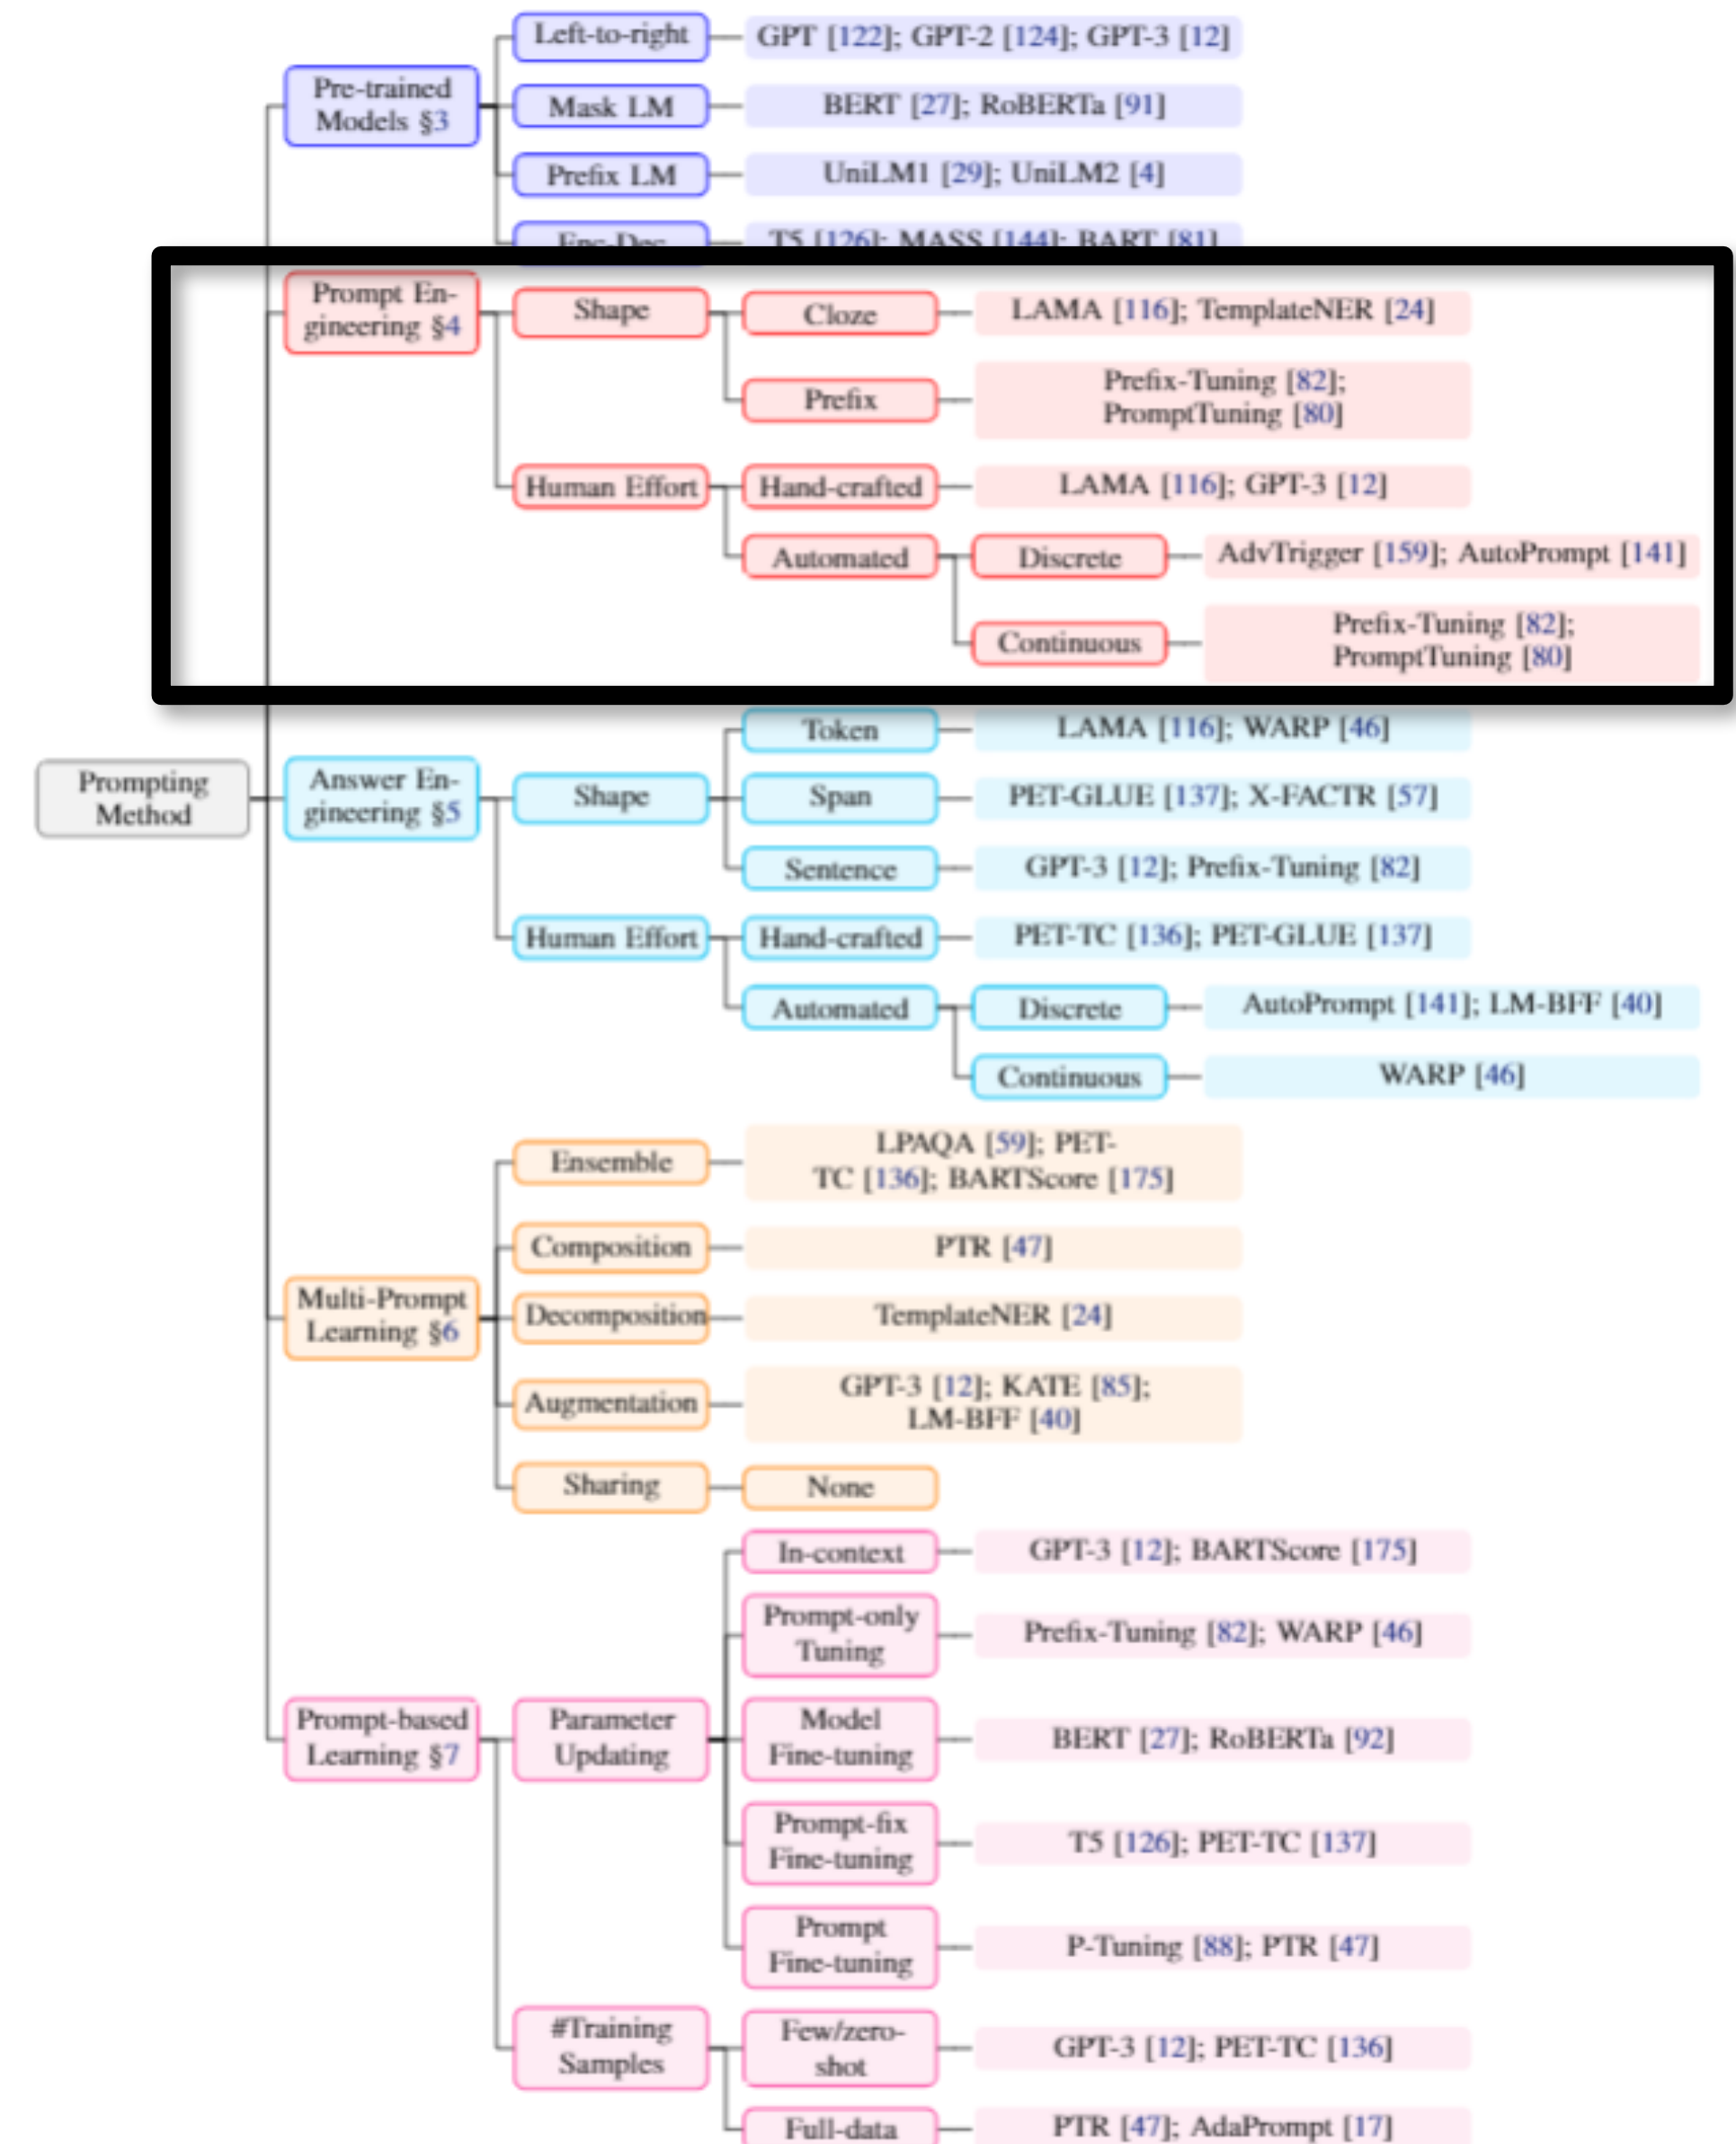

- Translation
- Text Summarization

- **Generation-like Tasks**

- Information Extraction
- Question Answering

Design Considerations for Prompting

- Pre-trained Model Choice
- Prompt Engineering
- Answer Engineering
- Expanding the Paradigm
- Prompt-based Training Strategies

Traditional Formulation V.S Prompt Formulation

Input: $x = \text{"I love this movie"}$

Predicting: $y = \text{Positive}$

Input: $x = \text{"I love this movie"}$

Template: $[x]$ Overall, it was a $[z]$ movie

Prompting: $x' = \text{"I love this movie. Overall it was a } [z] \text{ movie."}$

Predicting: $x' = \text{"I love this movie. Overall it was a } \text{fantastic} \text{ movie."}$

Mapping (answer -> label):
 $\text{fantastic} \Rightarrow \text{Positive}$

Traditional Formulation V.S Prompt Formulation

Input: $x = \text{"I love this movie"}$

Predicting: $y = \text{Positive}$

Input: $x = \text{"I love this movie"}$

Template: $[x]$ Overall, it was a $[z]$ movie

Prompting: $x' = \text{"I love this movie. Overall it was a } [z] \text{ movie."}$

Predicting: $x' = \text{"I love this movie. Overall it was a } \text{fantastic} \text{ movie."}$

Mapping (answer -> label):
 $\text{fantastic} \Rightarrow \text{Positive}$

How to define a suitable prompt template?

Prompt Template Engineering

How to define the shape of a prompt template?

How to search for appropriate prompt templates?

Prompt Shape

- Cloze Prompt

- prompt with a slot [z] to fill in the middle of the text as a cloze prompt,

I love this movie. Overall it was a [z] movie

- Prefix Prompt

- prompt where the input text comes entirely before slot [z]

I love this movie. Overall this movie is [z]

Design of Prompt Templates

- Hand-crafted
 - Configure the manual template based on the characteristics of the task
- Automated search
 - Search in discrete space
 - Search in continuous space

Representative Methods for Prompt Search

- Prompt Mining
- Prompt Paraphrasing
- Gradient-based Search
- Prompt/Prefix Tuning

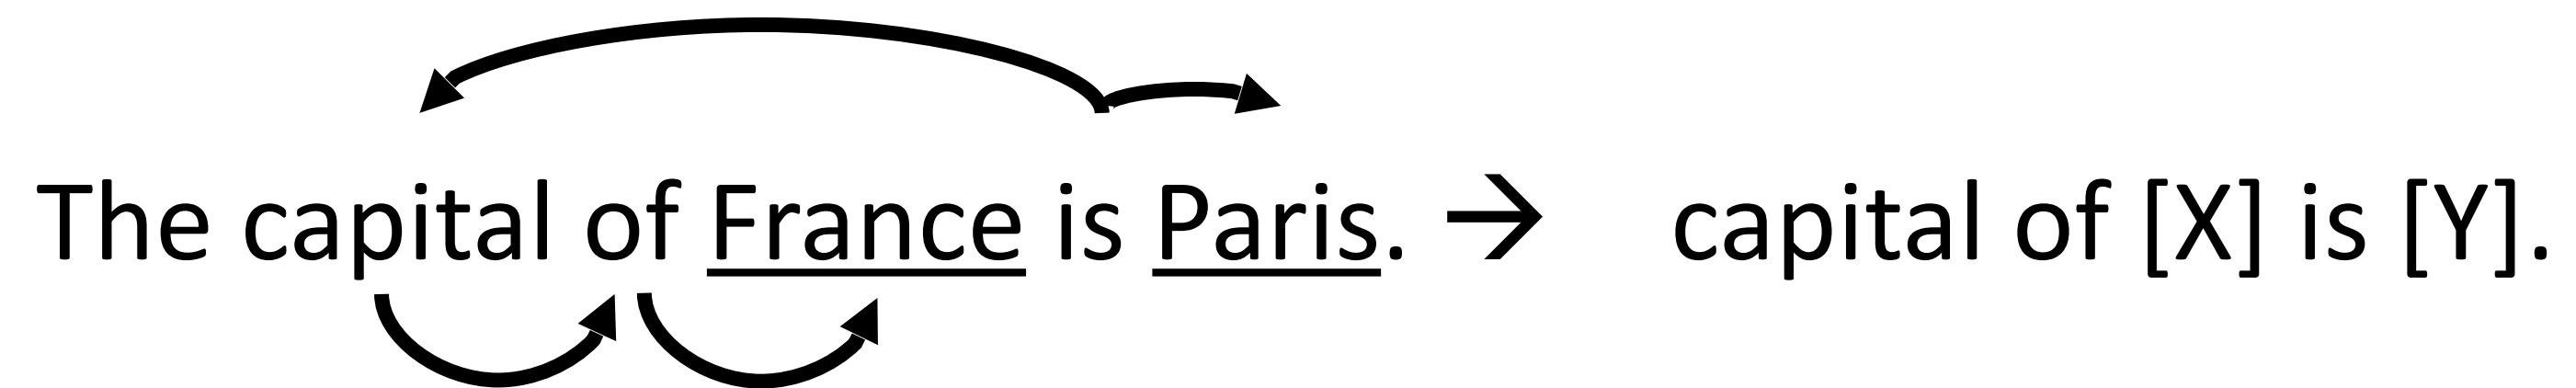

Prompt Mining (Jiang et al. 2019)

- Mine prompts given a set of questions/answers
- **Middle-word**

Barack Obama was born in Hawaii. → [X] was born in [Y].

- **Dependency-based**

The capital of France is Paris. → capital of [X] is [Y].

Prompt Paraphrasing (Jiang et al. 2019)

- **Paraphrase an existing prompt to get other candidates**
- e.g. back translation with beam search

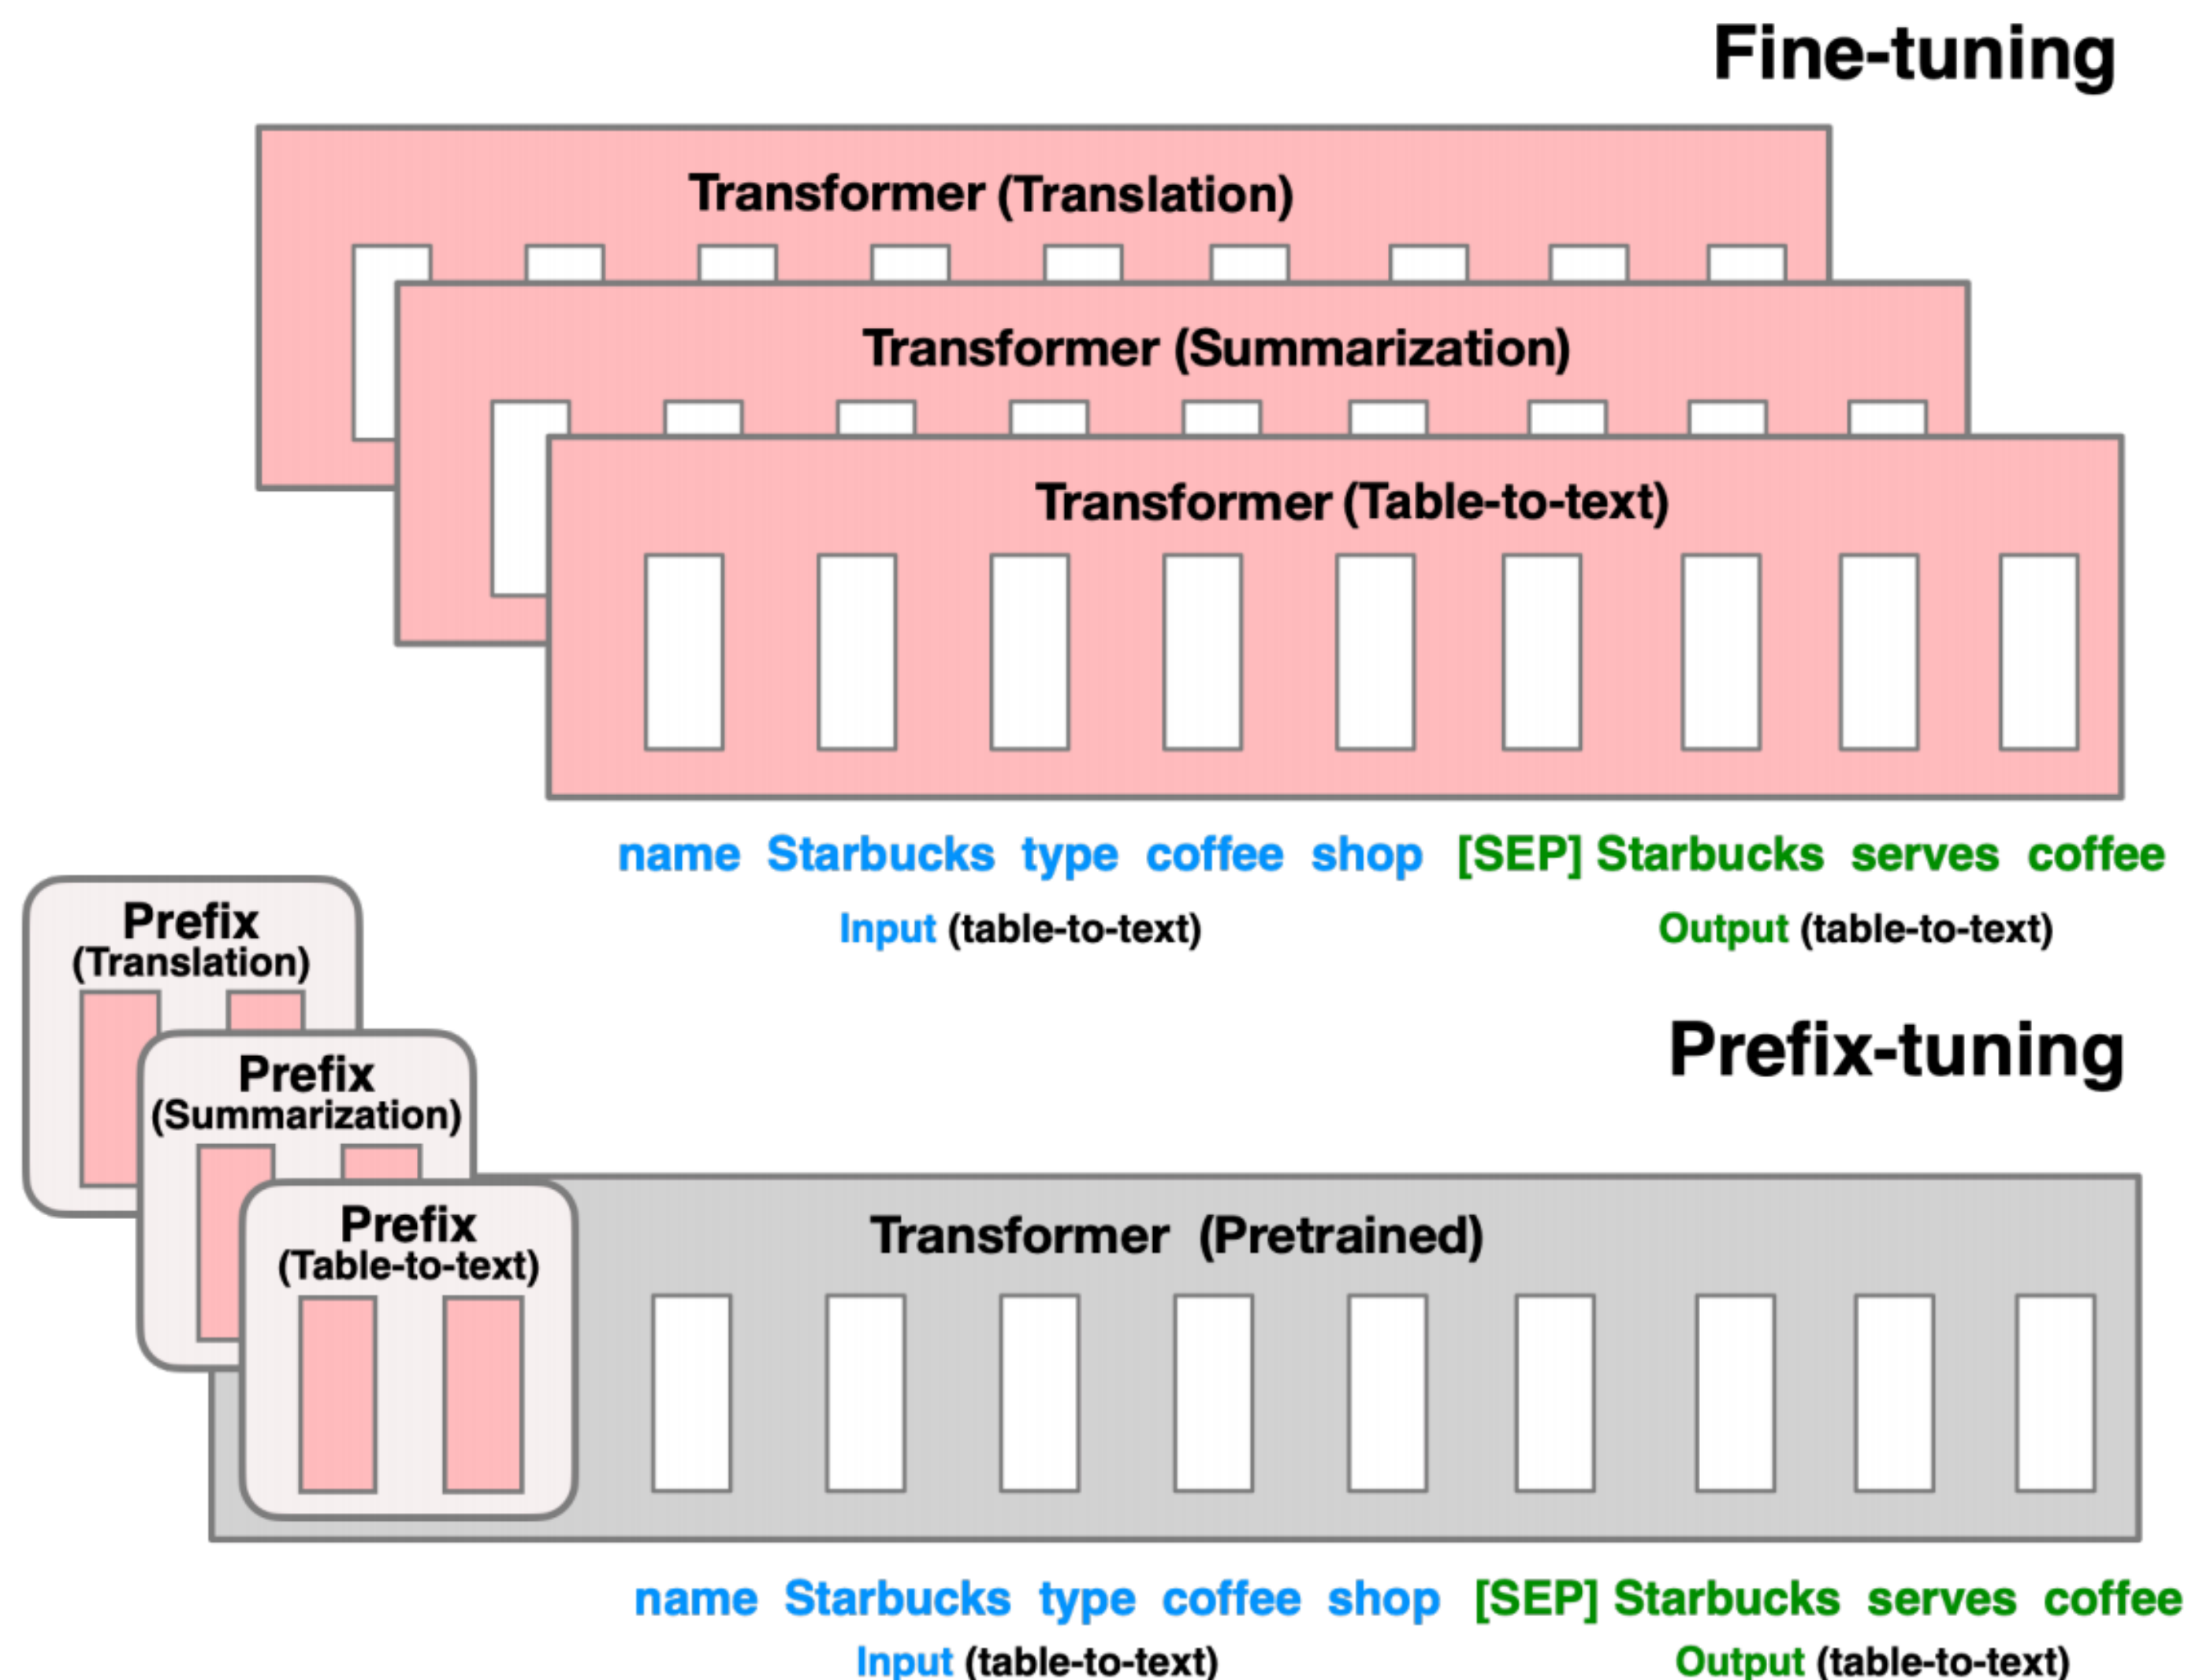

Gradient-based Search (Shin et al. 2020)

- Automatically optimize arbitrary prompts based on existing words

Prefix/Prompt Tuning (Li and Liang 2021, Lester et al. 2021)

- Optimize the embeddings of a prompt, instead of the words.
- "Prompt Tuning" optimizes only the embedding layer, "Prefix Tuning" optimizes prefix of all layers

Design Considerations for Prompting

- Pre-trained Model Choice
- Prompt Template Engineering
- **Answer Engineering**
- Expanding the Paradigm
- Prompt-based Training Strategies

Answer Engineering

- Why do we need answer engineering?
 - We have reformulate the task! We also should re-define the “ground truth labels”

Traditional Formulation V.S Prompt Formulation

Input: $x = \text{"I love this movie"}$

Predicting: $y = \text{Positive}$

Input: $x = \text{"I love this movie"}$

Template: $[x]$ Overall, it was a $[z]$ movie

Prompting: $x' = \text{"I love this movie. Overall it was a } [z] \text{ movie."}$

Predicting: $x' = \text{"I love this movie. Overall it was a } \text{fantastic} \text{ movie."}$

Mapping (answer -> label):
 $\text{fantastic} \Rightarrow \text{Positive}$

Traditional Formulation V.S Prompt Formulation

Label Space (Y)

Answer Space (Z)

Answer Engineering

- Why do we need answer engineering?
 - We have reformulate the task! We also should re-define the “ground truth labels”
- Definition:
 - aims to search for an answer space and a map to the original output Y that results in an effective predictive model

Design of Prompt Answer

How to define the shape of an answer?

How to search for appropriate answers?

Answer Shape

- **Token:** Answers can be one or more tokens in the pre-trained language model vocabulary
- **Chunk:** Answers can be chunks of words made up of more than one tokens
 - Usually used with cloze prompt
- **Sentence:** Answers can be a sentence of arbitrary length
 - Usually used with prefix prompt

Answer Shape

Type	Task	Input ([X])	Template	Answer ([Z])	
Text CLS	Sentiment	I love this movie.	[X] The movie is [Z].	great fantastic ...	token
	Topics	He prompted the LM.	[X] The text is about [Z].	sports science ...	Token or span
	Intention	What is taxi fare to Denver?	[X] The question is about [Z]	quantity city ...	
Text-span CLS	Aspect Sentiment	Poor service but good food.	[X] What about service? [Z].	Bad Terrible ...	
Text-pair CLS	NLI	[X1]: An old man with ... [X2]: A man walks ...	[X1]? [Z], [X2]	Yes No ...	
Tagging	NER	[X1]: Mike went to Paris. [X2]: Paris	[X1] [X2] is a [Z] entity.	organization location ...	
Text Generation	Summarization	Las Vegas police ...	[X] TL;DR: [Z]	The victim ... A woman	sentences
	Translation	Je vous aime.	French: [X] English: [Z]	I love you. I fancy you. ...	

Answer Search

- Hand-crafted
 - Infinite answer space
 - Finite answer space
- Automated Search
 - Discrete Space
 - Continuous Space

Discrete Search Space

- Answer Paraphrasing

- start with an initial answer space,
- then use paraphrasing to expand this answer space

- Prune-then-Search

- an initial pruned answer space of several plausible answers is generated
- an algorithm further searches over this pruned space to select a final set of answers

- Label Decomposition

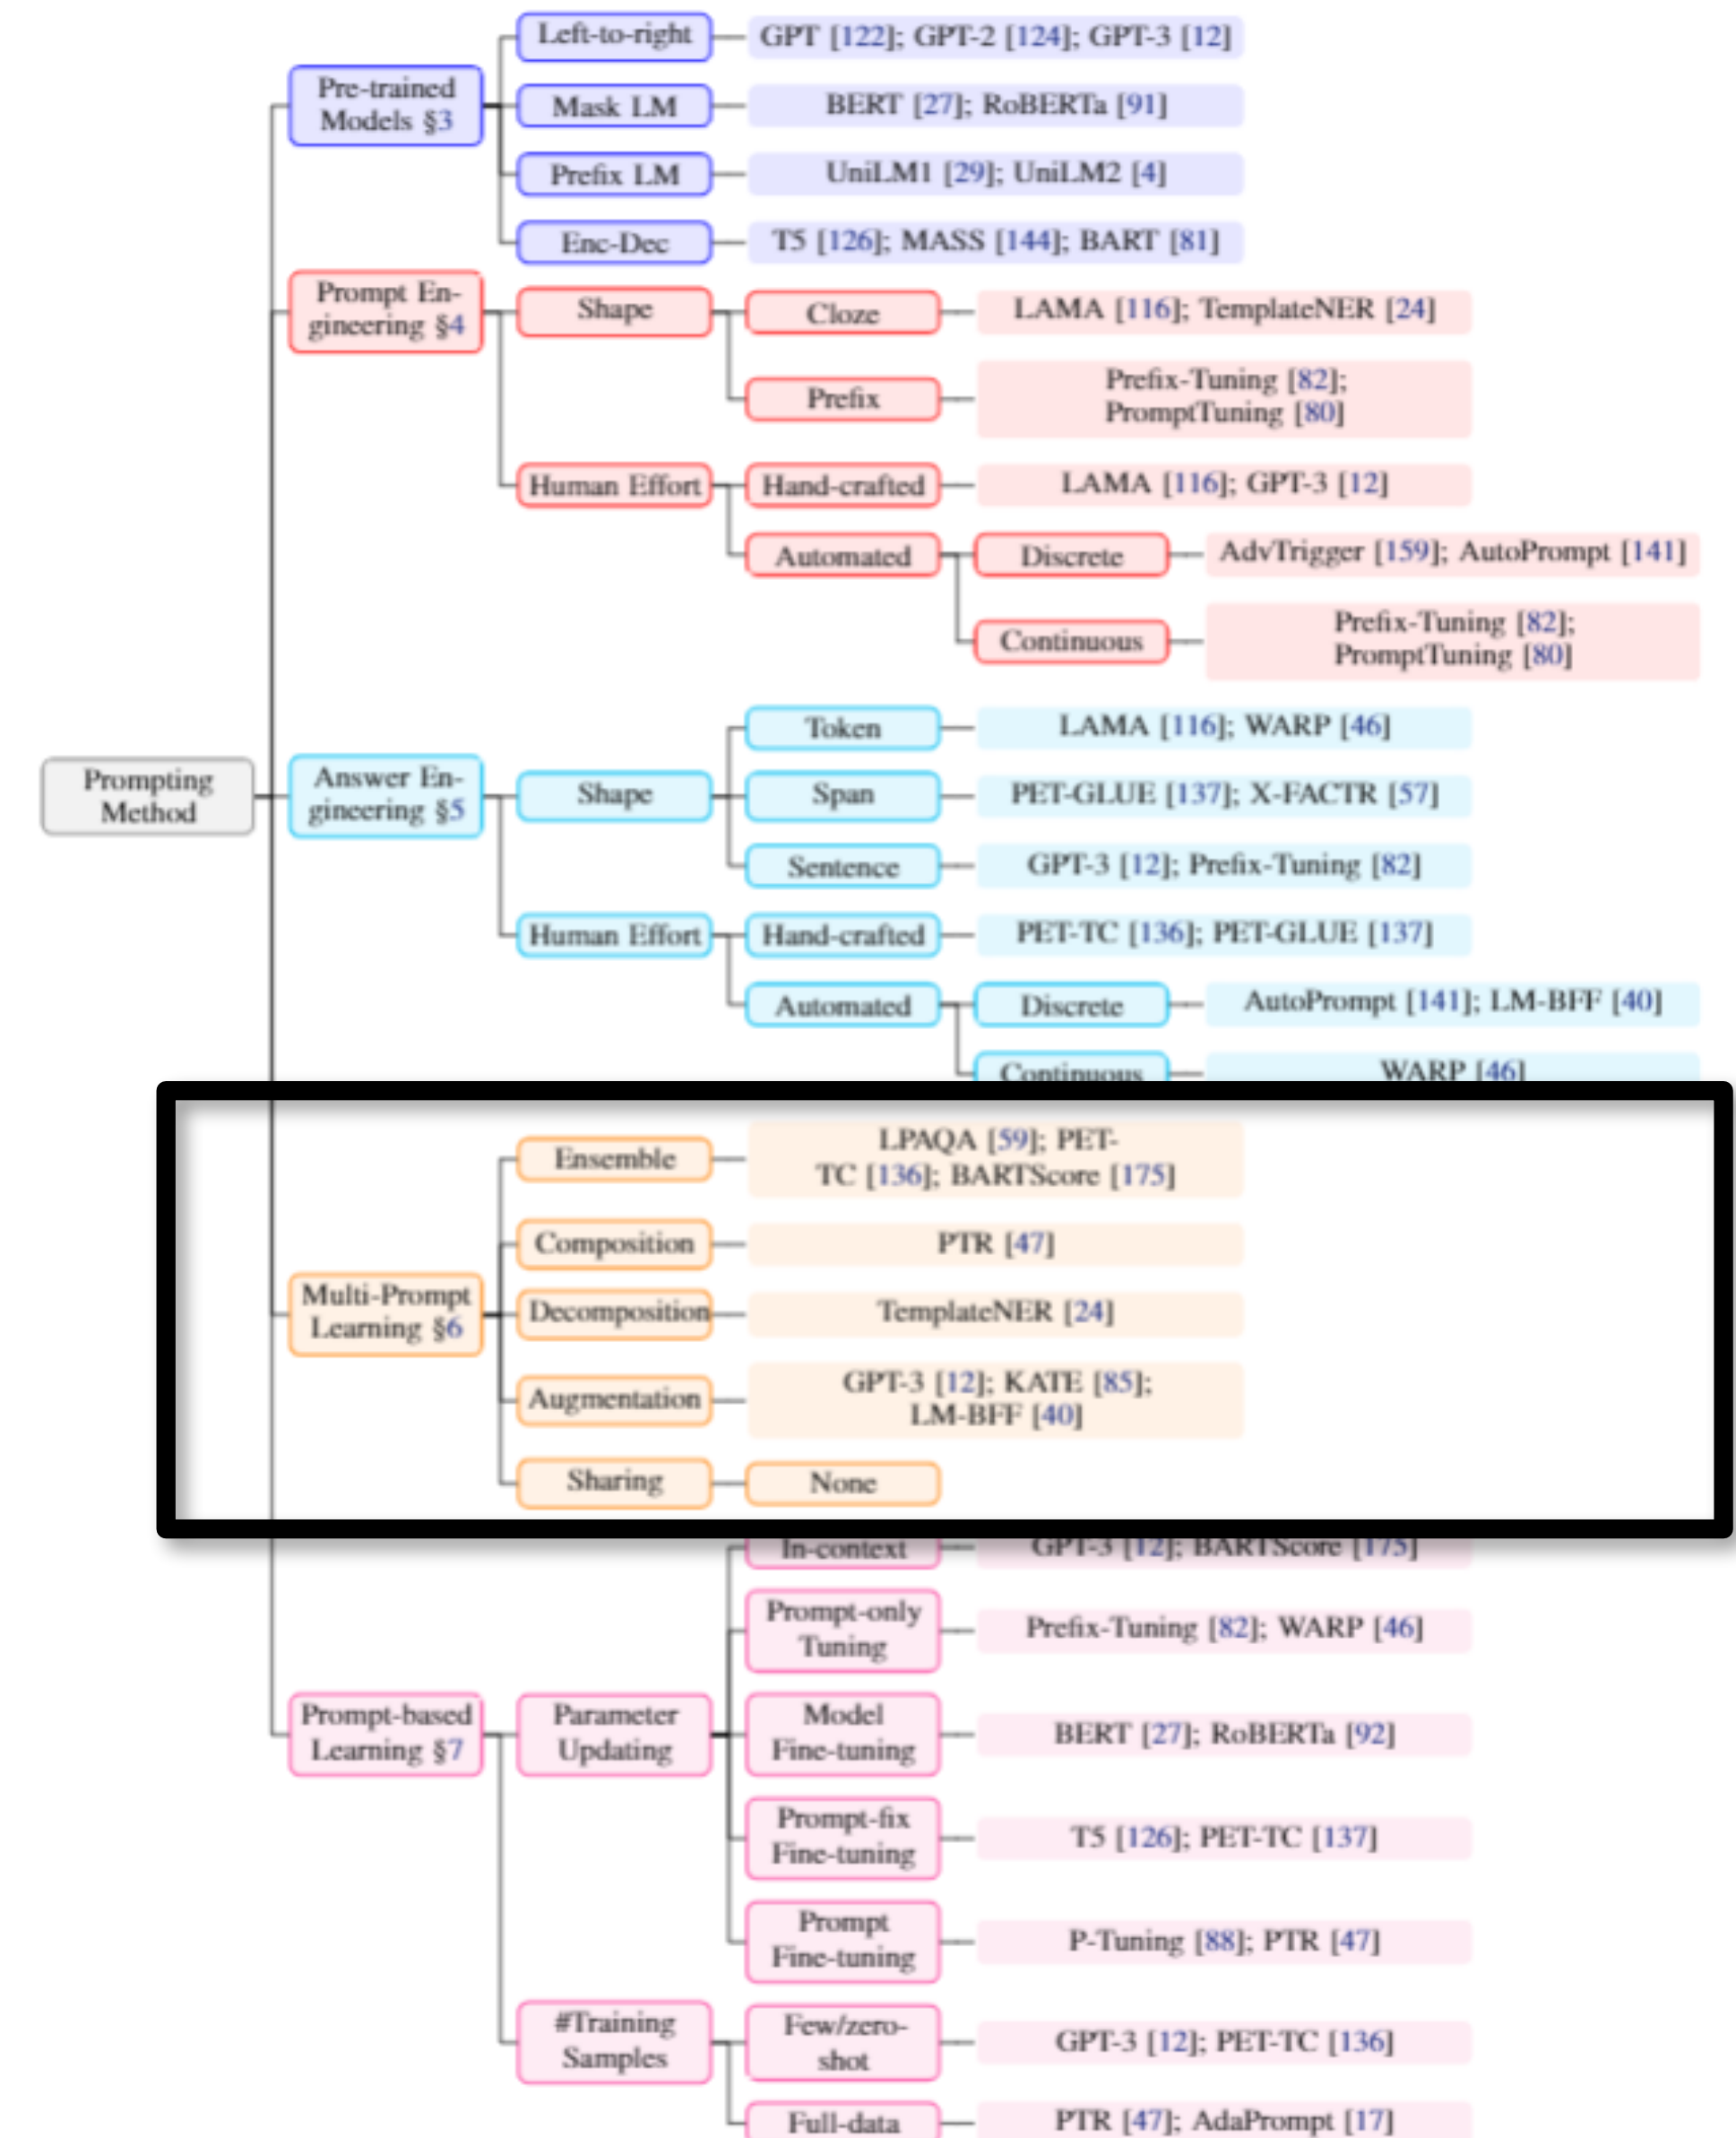

- decompose each relation label into its constituent words and use them as an answer
 - city_of_death => {person, city, death}

Continuous Search Space

- Core idea: assign a virtual token for each class label and optimize the token embedding for each label

Design Considerations for Prompting

- Pre-trained Model Choice
- Prompt Template Engineering
- Answer Engineering
- Expanding the Paradigm
- Prompt-based Training Strategies

Multi-Prompt Learning

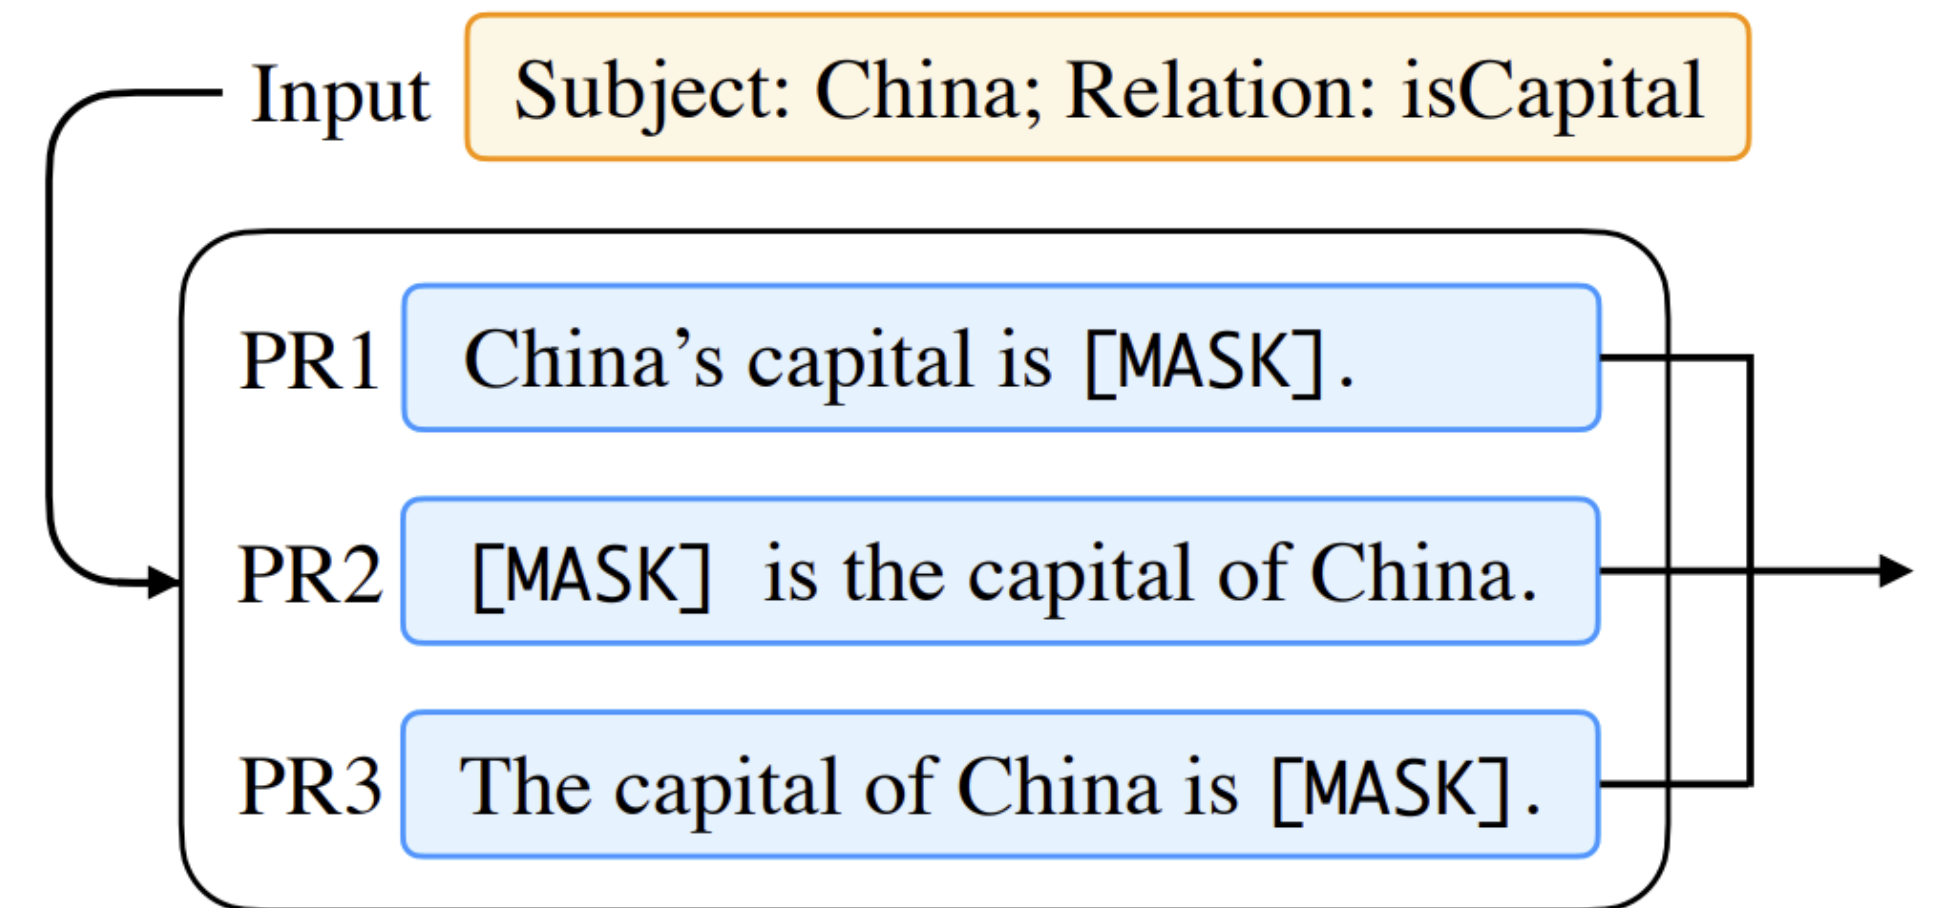

Multi-Prompt Learning

Prompt Ensembling

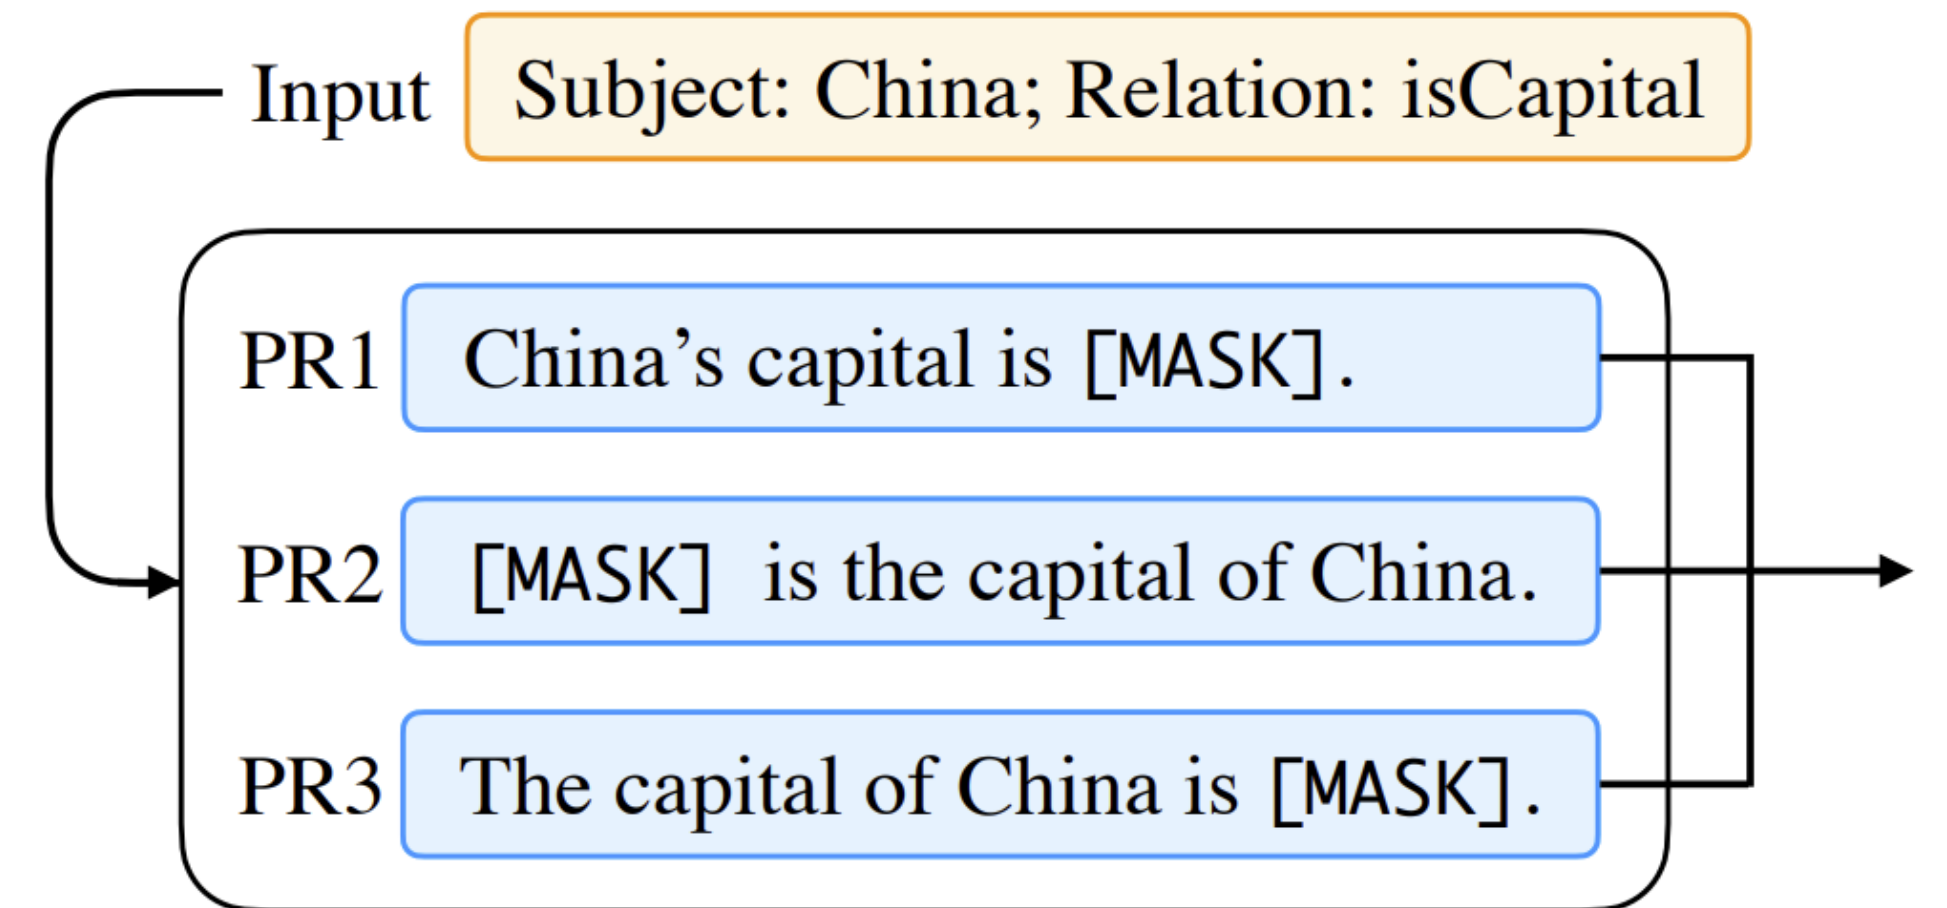

- **Definition**
 - using multiple unanswered prompts for an input at inference time to make predictions
- **Advantages**
 - Utilize complementary advantages
 - Alleviate the cost of prompt engineering
 - Stabilize performance on downstream tasks

Prompt Ensembling

- Typical Methods

- Uniform Averaging
- Weighted Averaging
- Majority Voting

Prompt Augmentation

- **Definition**

- Help the model answer the prompt that is currently being answered by additional answered prompts

- **Advantage**

- make use of the small amount of information that has been annotated

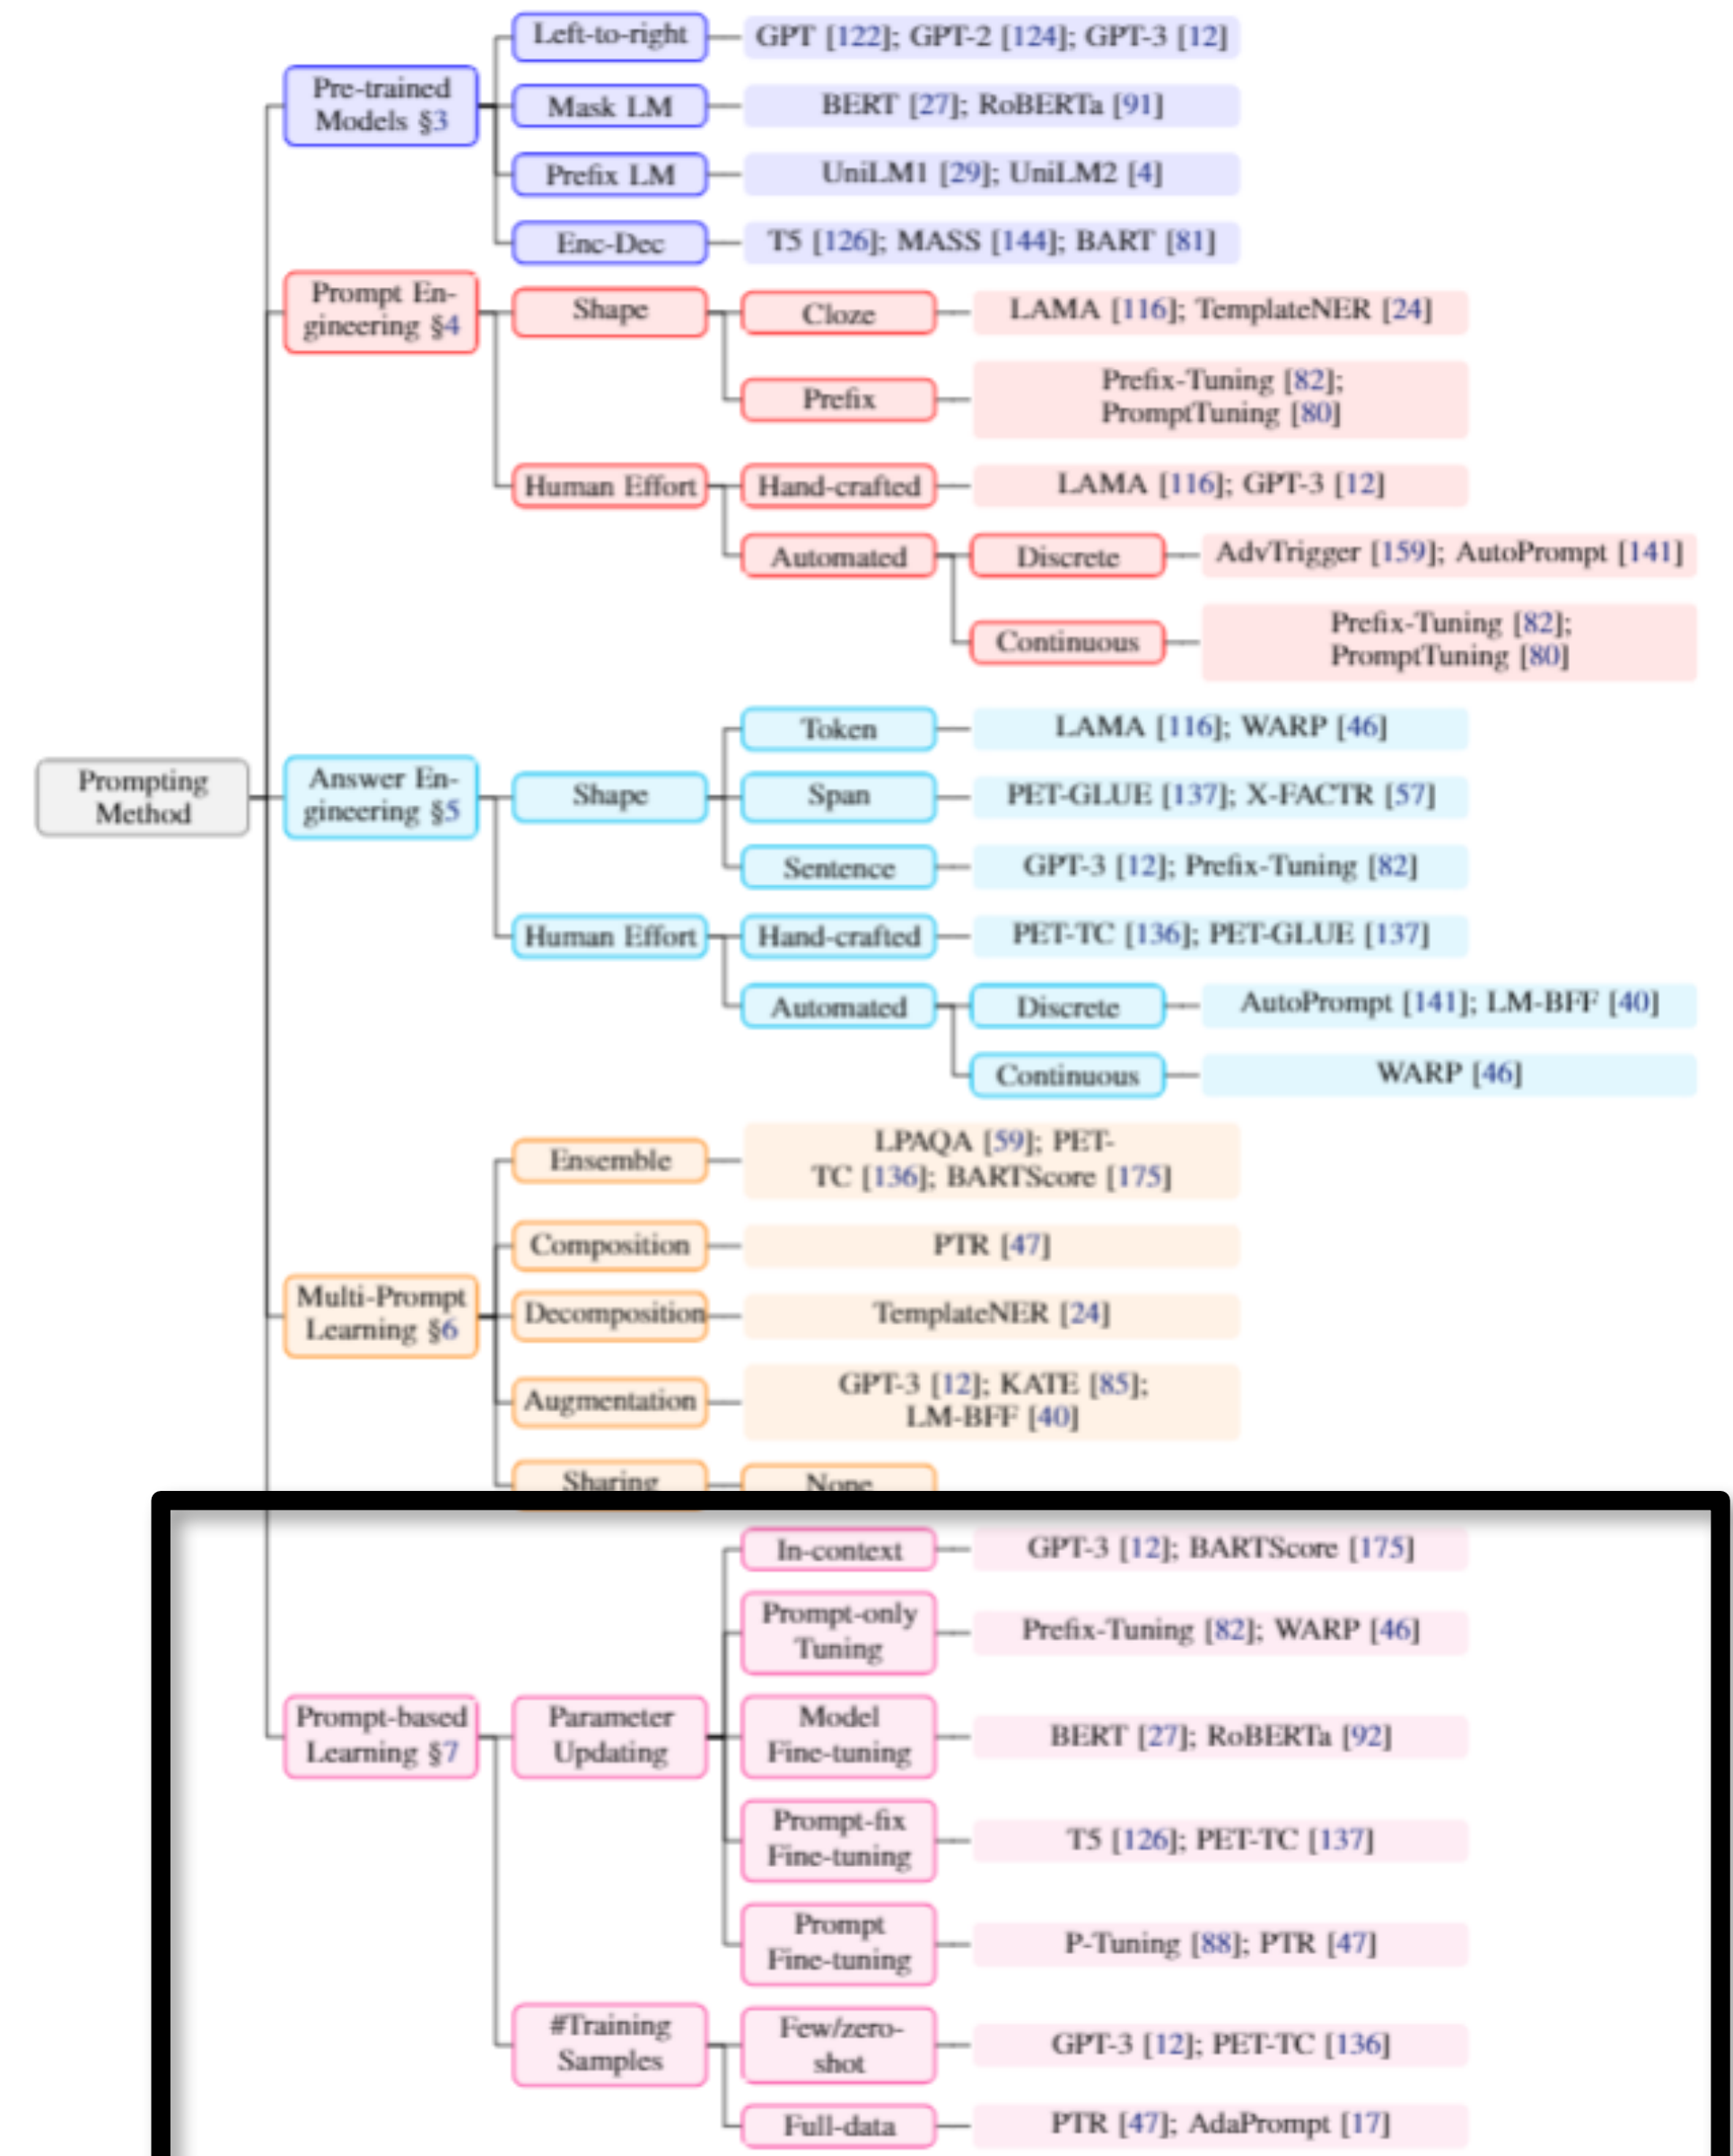

- **Core step**

- Selection of answered prompts
- Ordering of answered prompts

Design Considerations for Prompting

- Pre-trained Model Choice
- Prompt Template Engineering
- Answer Engineering
- Expanding the Paradigm
- Prompt-based Training Strategies

Prompt-based Training Strategies

- Data Perspective
 - How many training samples are used?
- Parameter Perspective
 - Whether/How are parameters updated?

Prompt-based Training: Data Perspective

- **Zero-shot:** without any explicit training of the LM for the downstream task
- **Few-shot:** few training samples (e.g., 1-100) of downstream tasks
- **Full-data:** lots of training samples (e.g., 10K) of downstream tasks

Prompt-based Training: Parameter Perspective

Strategy	LM Params Tuned	Additional Prompt Params	Prompt Params Tuned	Examples
Promptless Fine-Tuning	Yes	N/A	N/A	BERT Fine-tuning
Tuning-free Prompting	No	No	N/A	GPT-3
Fixed-LM Prompt Tuning	No	Yes	Yes	Prefix Tuning
Fixed-prompt LM Tuning	Yes	No	N/A	PET
Prompt+LM Fine-tuning	Yes	Yes	Yes	PADA

Too many, difficult to select?

Promptless Fine-tuning

Fixed-prompt Tuning

Prompt+LM Fine-tuning

Tuning-free Prompting

Fixed-LM Prompt Tuning

If you have a huge pre-trained language model (e.g., GPT3)

If you have few training samples?

If you have lots of training samples?

Questions?
